

# Quem somos nós

**Thai Braga** (DEV) @ Thoughtworks

**Pati Ghiraldelli** (DEV) @ Thoughtworks

# "LOMBO-O-QUÊ?"

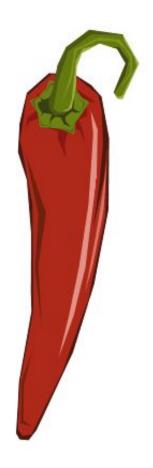

#### **UM POUCO DE CONTEXTO**

# O QUE É *LOMBOK*?

#### **ONDE VIVE, O QUE FAZ, COMO SE ALIMENTA?**

- Java
  - Linguagem verbosa
  - Muito código necessário até para aplicações pequenas
- Biblioteca Lombok
  - o Redução de boilerplate
  - Código gerado na compilação
  - Integração com IDEs
  - Maior produtividade, legibilidade e manutenibilidade

# INSTALANDO O LOMBOK

#### **INCLUINDO DEPENDÊNCIAS**

Maven

#### Gradle

```
compileOnly "org.projectlombok:1.16.16"
```

## INSTALANDO O *LOMBOK*

#### **CONFIGURANDO SUA IDE**

- Eclipse
- IntelliJ Idea
- Netbeans
- MyEclipse
- Spring Tools Suite
- JBoss Developer Studio
- Visual Studio Code

#### **GETTERS E SETTERS**

```
public class GetterSetterExample {
 private int age = 10;
 private String name;
 public int getAge() {
    return age;
  public void setAge(int age) {
    this.age = age;
 protected void setName(String name) {
    this.name = name;
```

```
import lombok.AccessLevel.PROTECTED;
import lombok.Getter;
import lombok.Setter;
public class GetterSetterExample {
 @Getter @Setter private int age = 10;
  @Setter (PROTECTED) private String name;
```

#### **CONSTRUTORES** (com nenhum ou com todos os argumentos)

```
public class Example<T> {
 private int x, y;
 private T desc;
 protected Example(int x, int y, T desc) {
    this.x = x;
    this.y = y;
    this.desc = desc;
 public Example() {
```

```
import lombok.AccessLevel.PROTECTED;
import lombok.AllArgsConstructor;

@AllArgsConstructor (access = PROTECTED)
public class Example<T> {
   private int x, y;
   private T desc;
}
```

#### **CONSTRUTORES** (com apenas alguns argumentos obrigatórios)

```
public class Example<T> {
   private int x, y;
   private T desc;

public static <T> Example<T> of (T desc) {
    return new Example<T> (desc);
  }
}
```

```
import lombok.AccessLevel;
import lombok.RequiredArgsConstructor;

@RequiredArgsConstructor (staticName = "of")
public class Example<T> {
    private int x, y;
    @NonNull private T desc;
}
```

## MÉTODOS equals() & hashCode()

```
public class Example {
private transient int transientVar = 10;
private String name;
private double score;
private String[] tags;
private int id;
 @Override public boolean equals(Object o) {
  if (o == this) return true;
  if (!(o instanceof Example)) return false;
  Example other = (Example) o;
 if (!this.getName().equals(other.getName()))
  return false:
  if (Double.compare (this.score, other.score)! ⇒)
  return false:
 if (!Arrays.deepEquals(this.tags, other.tags))
    return false:
 return true;
 @Override public int hashCode() { /* ... */ } }
```

```
import lombok.EqualsAndHashCode;
@EqualsAndHashCode
public class Example {
 private transient int transientVar = 10;
 private String name;
 private double score;
 private String[] tags;
  @EqualsAndHashCode.Exclude private int id;
```

# MÉTODO toString()

```
import java.util.Arrays;
public class Example {
private static final int STATIC VAR = 10;
private String name;
private String[] tags;
private int id;
 @Override
public String toString() {
     return "Example(" + this.name + "," +
                          this. shape + "," +
            Arrays.deepToString( this.tags) +
            ")";
```

```
import lombok.ToString;
@ToString
public class Example {
private static final int STATIC VAR = 10;
private String name;
private String[] tags;
 @ToString.Exclude private int id;
```

# UMA ÚNICA NOTAÇÃO PARA POJOS

```
public class DataExample {
private final String name;
private int age;
private double score;
private String[] tags;
public DataExample(String name) {
 this.name = name;
public String getName() {
 return this.name;
void setAge(int age) {
 this.age = age;
public int getAge() {
 return this.age;
public void setScore(double score) {
   this.score = score;
public double getScore() {
 return this.score:
public String[] getTags() {
```

```
import lombok.AccessLevel;
import lombok.Setter;
import lombok.Data;
@Data
public class DataExample {
private final String name;
 @Setter (AccessLevel.PACKAGE) private int age;
private double score;
private String[] tags;
```

#### **CONSTRUINDO OBJETOS**

```
public class Example {
private String name;
private int age;
private Set<String> occupations;
public static ExampleBuilder builder() {
 return new ExampleBuilder();
public static class ExampleBuilder {
 private String name;
 private int age;
 private ArrayList<String> occupations;
 public ExampleBuilder name(String name) {
   this.name = name:
  return this;
 public ExampleBuilder age(int age) {
  this.age = age;
  return this;
 public ExampleBuilder occupation(String occupation) {
  if (this.occupations == null)
   this.occupations = new java.util.ArrayList<String>();
   this.occupations.add(occupation);
   return this:
```

```
import lombok.Builder;
import lombok.Singular;
import java.util.Set;
@Builder
public class Example {
private String name;
private int age;
 @Singular private Set < String > occupations;
Example.builder().name("Fulano da Silva")
.age (25)
.occupation("Consultant")
.occupation("Developer").build();
```

#### CHECANDO ARGUMENTOS NULOS

```
public class NonNullExample extends Something
private String name;
public NonNullExample(Person p) {
  super("Hello");
  if (p == null) {
   throw new NullPointerException (
         "p is marked @NonNull but is null" );
  this.name = p.getName();
```

```
import lombok.NonNull;

public class NonNullExample extends Something {
  private String name;

public NonNullExample(@NonNull Person p) {
  super("Hello");
  this.name = p.getName();
  }
}
```

## LOGANDO SÓ QUE REALMENTE IMPORTA

```
import org.slf4j.*;

public class LogExample {
    private static final Logger log =

LoggerFactory.getLogger(LogExample. class);

    public static void main(String... args) {
        log.error("Something else is wrong");
    }
}
```

```
@Slf4j
public class LogExample {

   public static void main(String... args) {
      log.error("Something else is wrong");
   }
}
```

O que acharam?

**Prontas pra sair usando Lombok?**
